

ABSTRACT OF THE DISCLOSURE

A media wall for supporting various types of media, such as plasma screen or flat screen television sets, as well as other types of thin media, includes an upright vertical wall to which the media is mounted. The wall may include a pair of sidewalls mounted to a back
5 face of the vertical wall, as well as a shelf extending forwardly from the vertical wall. At least one aperture may be included for enabling power or data cables to be inserted through the wall from the front to the back. A video camera support may be mounted on the vertical wall. The wall may be pivotable about a vertical axis to allow easy access to the rear of the wall for setting up and adjusting the electrical cabling used to support the media.
